Portfolio 6: My Canteen Cravings List

Description:

A simple program using lists to track and organize the meals I want to eat.

My starting list of cravings (Using a List Constant)

```
my_cravings = ['Pinangat', 'Bicol Express', 'Laing']
```

I realized I also want some Pancit Bato, so I'll add it to the end of my list

```
my_cravings.append('Pancit Bato')
```

I want to eat them in alphabetical order so I will sort the list

```
my_cravings.sort()
```

Displaying the final organized list using a definite loop

```
print("My planned canteen meals for the week:")
```

```
for meal in my_cravings:
```

```
    print("-", meal)
```

Checking if a specific food is in my list using the 'in' logical operator

```
if 'Bicol Express' in my_cravings:
```

```
    print("\nAwesome, Bicol Express is on the menu!")
```

```

# Portfolio 6: My Canteen Cravings List

# **Description:**
# A simple program using lists to track and organize the meals I want to eat.

# My starting list of cravings (Using a List Constant)
my_cravings = ['Pinangat', 'Bicol Express', 'Laing']

# I realized I also want some Pancit Bato, so I'll add it to the end of my list
my_cravings.append('Pancit Bato')

# I want to eat them in alphabetical order so I will sort the list
my_cravings.sort()

# Displaying the final organized list using a definite loop
print("My planned canteen meals for the week:")

    print("-", meal)

# Checking if a specific food is in my list using the 'in' logical operator
if 'Bicol Express' in my_cravings:
    print("\nAwesome, Bicol Express is on the menu!")

```

```

My planned canteen meals for the week:
- Bicol Express
- Laing
- Pancit Bato
- Pinangat

```

```

Awesome, Bicol Express is on the menu!

```
